## Universal Fialka key cards

Print this page at actual size (100%) and separate the four cards below. Each card should be 100 mm long and approx. 80.5 mm wide. Punch a row of perforation holes at the top. At least two perforation holes should be present (indicated by the two arrows) as these are used to mate with the index pins in the card reader. Each perforation hole must be 1.8 mm wide.

Use a suitable tool, e.g. a 2.2 mm hollow pipe, to create the actual key holes. Each row/column combination should have exactly one hole. Create two identical cards if you want to communicate between two Fialka machines.
