Security solutions for supreme demands

Compumatica secure networks provides high-level security solutions for the protection of highly sensitive data transmitted over public or private networks. We develop, produce and implement crypto-systems for organizations with maximum security demands in public authorities, banks, insurance companies and industrial enterprises.

There is no duplicate key for our security and encryption products – in contrast to non-European products – which could have to be handed over to authorities in case of doubt. Only the individual user possesses and controls the security management. Our customers can thus be sure that there are no hidden backdoors through which third parties could access their sensitive data.

Compumatica demands staff and products to meet high standards of reliability and quality. Some of our solutions have been approved or even certified according to the strict regulations of the Dutch National Communications Security Agency and the German Federal Office for Information Security. Every single product goes through a quality assurance phase in which it is subject to a long-term test.

Optimal protection?
High-level security technology.
European encryption and firewall technology,
the solution for government, banks, and industry.

Strategic orientation

"The security of your data is our job – we secure your network." We have always felt obliged to this **principle** from the beginning. We develop complex security solutions according to your specific requirements. In this context, we work in close cooperation with Dutch and German authorities and provide consulting with a view to present and future technological security demands.

With our product families CryptoGuard VPN, CryptoWall and CompuWall we concentrate on very secure and reliable solutions for our customers. The management of these products is realized by the balanced and flexible Security Management Station.

The demand of our customers for encryption of data with several Gbps can be fulfilled by the CompuCrypt XL which encrypts data with a throughput of up to 10 Gbps.

Mobile working and phoning becomes more important in future.

Confidential company information will be communicated world-wide via e-mail. On its way many instances have the opportunity to intercept the information.

Due to the development of the Compumatica GSM and the CompuWall it is now possible to send and receive encrypted conversations, SMS data and e-mail.

Our **service portfolio** comprises the design, development, production and implementation of security solutions for medium-sized and large networks. We furthermore offer consulting services: IT security workshops and network studies. Services such as installation, configuration, hotline and training make our portfolio complete.

New and further developments of our solutions are based on the demands and requirements of our customers. The experiences of our Professional Services department are taken into account with the aim to make our products particularly user-friendly. By recognizing market trends as well as risks and demands, our developers and market researchers contribute their knowledge to our road map.

Enterprise philosophy

Our philosophy is based on three central topics: **C**ustomers, **S**taff, and **Q**uality.

The satisfaction of our **customers** is our top priority. To achieve this, we offer excellent services, dynamical developments and up-to-date technologies. Standard products and their features are designed according to our customers' demands, complex security solutions are developed according to customer-specific requirements.

Our **staff** is highly qualified and competent. We greatly emphasize the professional training and knowledge extension of our employees; their satisfaction is our concern. Our customers benefit from our staff's loyalty.

We guarantee the **quality** of our products and services by means of elaborate technologies that have been tried and tested for years, by permanently further developing our products and adjusting them to present and future requirements. Whenever we extend our portfolio by third-party products, we only choose solutions from leading and proven manufacturers.

Certification, approval, and experience

Generally acknowledged certificates set standards and provide confidence as they confirm the security properties of products and systems on the basis of proven criteria. Numerous security solutions developed by Compumatica secure networks have already been approved by independent certification authorities.

History

- 1991 – Foundation of Compumatica in Uden/The Netherlands
- 1993 – Development of KryptoGuard Version 1 (KryptoKom)
- 1996 – First supply of KryptoWall to German authorities (KryptoKom)
- 2002 – Takeover of the Network Security business line of Utimaco Safeware (former KryptoKom), foundation of Compumatica secure networks GmbH in Aachen/Germany
- 2003 – Further development of the VPN product line and the central Security Management Station
Takeover of the Philips Crypto BV technologies
- 2004 – Approval of VS-NfD CryptoGuard VPN 4500-B
- 2005 – Acquisition of the Utimaco Safeware firewall technology
Picture and word mark "Deutsche Krypto Industrie" and "Nederlandse Krypto Industrie"
- 2006 – "Departementaal vertrouwelijk" and NATO approval for the entire CryptoGuard VPN family from desktop to Gigabit solution
- 2008 – Introduction of CryptoGuard VPN 5000 family with smartcard technology
Approval DV-NL-AES
- 2009 – Introduction of Compumatica GSM encrypted voice and data communication
Release of CompuCrypt XL: up to 10 Gbps – encryptor

References

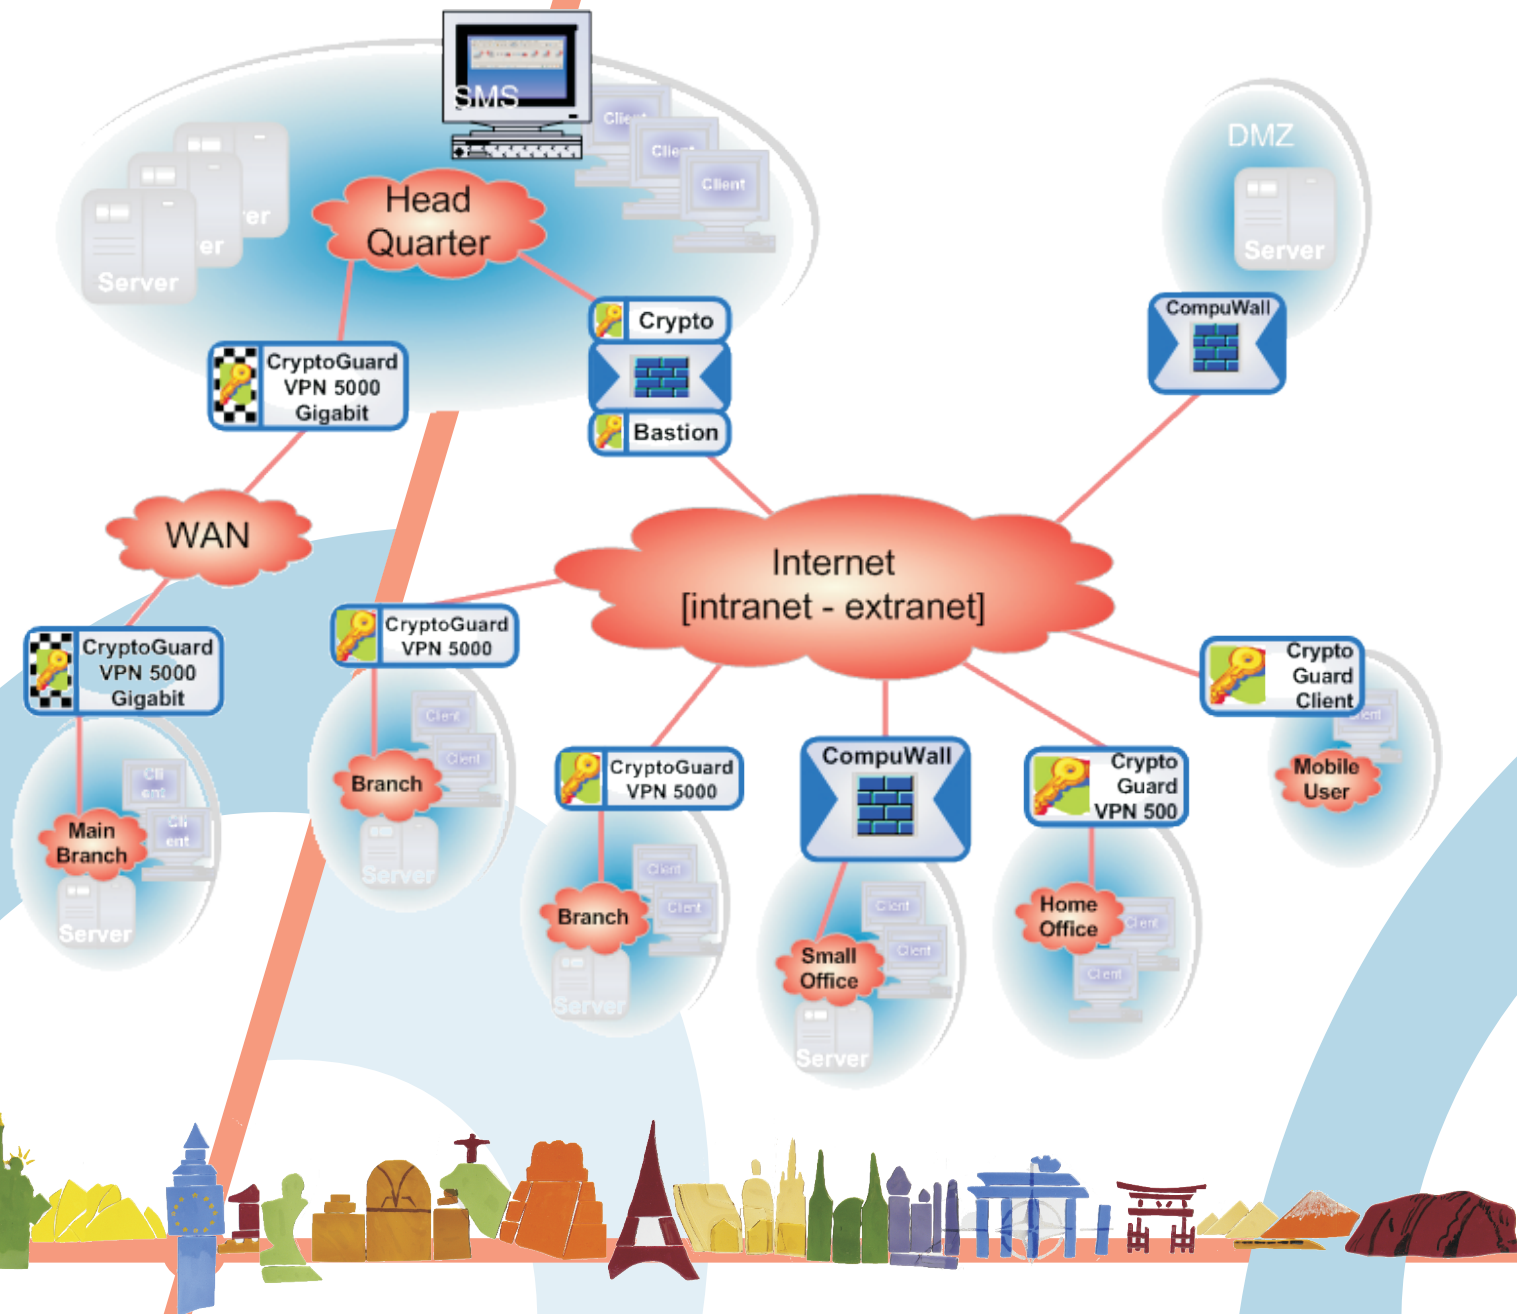

Many of our customers do not wish to be named because of their strict security and secrecy policies. Of course, we respect this wish.

We therefore ask for your understanding that we can only provide you with a detailed list of selected references on request. The products are described in a very general way. As Compumatica products are employed in highly sensitive areas of a company, we are subject to very strict non-disclosure agreements. We must not disclose any information on the conception, the order volume and the exact location of the systems nor the configuration of the security mechanisms.

Optimal protection?
High-level security technology.
European encryption and firewall technology,
the solution for government, banks, and industry.

The security of your data is our job – we secure your network

Our service portfolio – Your security

- According to your specific requirements
- Design, development, production, and implementation of security solutions for medium-sized and large networks
- Consulting: IT security workshops, network studies
- Services: installation, configuration, hotline, training

Product families

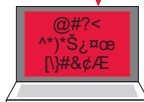

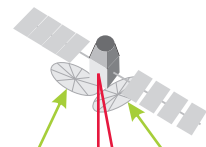

- CryptoGuard VPN – for secure Virtual Private Networks
- CryptoWall – the only three-stage firewall system on the market
- CompuWall – highest security for small networks
- Security Management Station (SMS) – central administration and configuration
- CompuCrypt: up to 10 Gbps high speed encryption
- Compumatica GSM: secure mobile voice and data communication
